

What I claim as my invention is:

1. A push-type vacuum cleaner comprising:
 - (a) a vacuum component, the vacuum component having a top surface and a bottom surface, the bottom surface having a plurality of wheels rotatably attached to the bottom surface, the vacuum component further including a height adjustment knob attached to the top surface, the vacuum component further including an internal motor,
 - (b) a bag holder unit having two ends, a first end and a second end, the first end of the bag holder compartment pivotally attached to the vacuum component, the bag holder unit having a plurality of surfaces comprising a front surface and a rear surface,
 - (c) a dirt collection bag located within the bag holder compartment,
 - (d) a handle attached to the second end of the bag holder compartment,
 - (e) a battery,
 - (f) mounting means for mounting the battery to the rear surface of the bag holder unit,
 - (g) at least one electrical connection between the battery and the internal motor,
 - (h) a light front-mounted on vacuum component, and
 - (i) power means for providing power to the light.
2. A push-type vacuum cleaner according to claim 1 wherein the power means for providing power to the light further comprises:

- (a) a generator located within the vacuum component, the generator placed into direct contact with at least one wheel of the plurality of wheels attached to the bottom surface of the vacuum component,
- (b) an electrical connection between the generator and the light,
- (c) wherein the rotational energy generated by each wheel in motion while in contact with the generator is transformed by the generator into electrical energy, thereby providing power to the light.
3. A push-type vacuum cleaner according to claim 1 wherein the mounting means for mounting the battery on the top surface of the vacuum compartment further comprises:
- (a) a battery mount fixedly attached to the rear surface of the bag holder unit,
- (b) wherein the battery would be removably placed on the battery mount.
4. A push-type vacuum cleaner according to claim 3 wherein the battery would preferably be a twenty-four volt battery.
5. A push-type vacuum cleaner according to claim 3 wherein the battery would preferably be a rechargeable battery.
